

## A LIGHTWEIGHT, EASY-TO-USE 14" POWER CUTTER

The Partner K700 Active III is a further development of our gas-powered all-round cutter, the K700 Active, and is among the most active cutters in the world from several perspectives.

The revolutionary Active Air Filtration filter system and the robust design makes the machine uniquely durable and reliable. It is seldom out of action for servicing, being able to work actively for long periods of time.

Long service intervals, high durability and fewer filter replacements make it an obvious choice for tool hire companies and contractors. Its flexibility, versatility and model ergonomics have also made it a favourite among demanding users.

### **Reliable strength and significantly less maintenance**

Dust particles are a cutting machine's worst enemies. These machines work in incredibly tough environments, where large quantities of dust clog filters and reduce engine power. This is where you suffer costs from downtime.

The unique Active Air Filtration system separates 80–90 % of the cutting dust from the intake air before it reaches the air filter. The second filter stage comprises a three-layer, oil-impregnated plastic foam filter, while a pleated paper makes up the final dust obstacle.

The unique system ensures that you retain a high output and reduce repair and maintenance costs.

### **SmartCarb™ – A powerful breakthrough**

Partner has developed SmartCarb™, a carburettor

### **Features**

- Active Air Filtration
- SmartCarb™
- EasyStart
- Dura Starter
- Automatically lubricated clutch bearing
- Reversible cutting arm
- Ergonomic design
- Wet cutting kit
- Enclosed transmission
- Easy Adjustable blade guard
- Fuel indicator

### **Suitable for**

- Light concrete cutting
- Pile cutting
- Minor asphalt work
- Masonry work
- Gas/water/sewer maintenance
- Dismantling work (auto, ship, airplane etc.)
- Landscape

# Diamond-Cutting-Tools.Com

with built-in filter compensation, to keep the air/fuel ratio constant even when the filter is clogged. This means that the engine power is retained and you do not need to adjust the carburettor manually or replace the filter before it is absolutely necessary. By integrating SmartCarb™ in the carburettor, we achieve an extremely robust and reliable design with no protruding vacuum hoses and no other external components that can come loose and cause problems.

SmartCarb™ can be viewed as the fourth stage in the Active Air Filtration system. Together, the systems produce maximum performance, lower maintenance costs and lower fuel consumption.

## **Unbeatable efficiency in the 70 cc class**

The Partner K700 Active III is a powerful 71 cc cutter with excellent ergonomics, providing you with an unbeatable tool in its class. Thanks to its completely sealed filter system, the K700 Active is also easy to keep clean and the engine delivers a high power output for a long time, making the Partner K700 Active the most active 14" cutter in the world.

## **Dura Starter**

The starter mechanism on a cutting machine is extremely exposed to dust and dirt. Partner has developed a completely sealed starter mechanism with a new sealing system which prevents dust from entering the mechanism's sensitive parts. Dura Starter has also been provided with a stronger starter cord with greatly increased durability.

## **Decompression valve**

The Easy Start decompression valve makes it easy to start the engine. It minimises the power that is required to start the engine and reduces wear and strain on the starter mechanism. The valve is automatically closed at the first ignition.

## **Reversible cutting arm**

The cutting arm can be turned quickly and easily, allowing the user to cut close to wall or the floor.

## **Automatic clutch bearing lubrication**

**Call Alan – 877.729.8720**

# Diamond-Cutting-Tools.Com

One special function on Partner's cutting machines is the automatic clutch bearing lubrication. As the bearing operates in a very dusty, dry and hot environment, it is exposed to heavy punishment. Automatic lubrication reduces the risk of the bearing seizure, and therefore entails increased reliability and reduced maintenance.

## **Enclosed transmission**

The drive belt on all Partner's petrol-powered cutters is totally enclosed – waterproof and dustproof. Enhanced belt life also means improved reliability and reduced service input.

## **Fuel filter with increased filtration capacity**

The new filter with increased filtration capacity and a longer lifetime prevents cutting dust and other dirt from entering and obstructing the fuel supply.

## **Technical data**

|                       |                              |
|-----------------------|------------------------------|
| Engine                | Air cooled, two cycle engine |
| Displacement          | 71 cc                        |
| Power                 | 4.8 hp (3.5 kW)              |
| Weight, without blade | 9.3 kg                       |
| Fuel tank volume      | 0.70 l                       |

## **Blade**

|                |              |
|----------------|--------------|
| Blade Diameter | 14" (350 mm) |
| Cutting Depth  | 5" (125 mm)  |

Standard arbor bushing 1" (25.4 mm) \*

\* Replaceable 20 mm arbor bushing available

**Partner K700 \$810.00**
